## **XEROX BOLSTERS COLLABORATIVE DOCUMENT MANAGEMENT WITH LATEST VERSION OF DOCUSHARE**

*DocuShare 2.2SP1 Underscores Company's Commitment to Helping People  
Find Better Ways to Do Great Work Together*

PALO ALTO, September 1, 2001 – Xerox Corporation unveiled enhanced DocuShare software today that will power new customer applications and result in easier knowledge sharing. This latest version of DocuShare provides enhanced performance, better functionality and scalability, and tighter integration with Microsoft Windows applications.

“Sharing information is the basis of collaboration,” according to David W. Smith, Vice President of the DocuShare Business Unit. “Because DocuShare incorporates Xerox’s understanding of document management and the processes that drive it, we can significantly increase the productivity of knowledge workers and help them achieve higher ROI at a very attractive price.”

The new Xerox DocuShare 2.2 SP1, an upgrade of its popular Web-based knowledge sharing software, now features direct integration with Microsoft Outlook so that users can realize the benefits of DocuShare’s collaborative environment directly from their desktop. For the first time, they will be able to store, search and access documents stored in DocuShare without leaving Outlook.

In addition, the new version supports LDAP (Lightweight Directory Access Protocol), making it easier for an enterprise to administer multiple DocuShare servers. The new software also includes improved Windows Explorer and ODMA support.

Xerox is also offering an enhanced software developers’ kit for DocuShare that enables third-party developers to offer integration with workflow, archiving, portable storage and high-speed scanning and indexing products.

## *Xerox Announces DocuShare 2*

More than 3000 DocuShare servers have been installed in 37 countries. DocuShare now enables over 700,000 users in organizations ranging from academic institutions and government agencies to financial, medical, retail and manufacturing organizations to easily share documents of any kind in a secure, Web-enabled environment. DocuShare is a superior solution for organizations that need:

- Secure storage and retrieval of personal, group, or corporate information.
- Community access to information via a Web portal
- Collaborative task and project management.
- An easy yet robust document management system at an affordable price.

Customers today face an ever-increasing onslaught of information. DocuShare allows the secure exchange, management, and storage of that information, whether paper-based or paperless, to an unlimited number of guests or users in collaborative intranet, extranet, or Internet environments. Incredibly easy to use and deploy, DocuShare is the cross-platform leader in Web-based knowledge sharing software. And, DocuShare is seamlessly integrated with the Xerox family of office printers, multifunction machines, and scanning devices providing a total knowledge management solution from a single vendor.

DocuShare was part of a technology solution for sharing and accessing information at the University of Missouri that was recently cited in the *Computerworld* Smithsonian Awards.

DocuShare 2.2 SP1 is now available in English, French, German, Spanish, Italian, Brazilian Portuguese and Japanese through all Xerox Sales channels. Please contact your Xerox Account Representative for further information.
